High performance, low-latency signal transport solutions for transporting, routing and distributing audio, video, intercom and control data.

Description

The MUX-22 Series is a group of fiber interfaces that distribute multiple professional video and audio signals, such as SD/HD/3G-SDI over the same optical fiber. The panels have 8 SD/HD/3G-SDI coaxial video inputs or outputs, a Coarse Wavelength Division Multiplexing (CWDM) module, and 4 video inputs, 4 video outputs and 4 4-wire RJ45 matrix ports.

Connectivity

The MUX-22 Series seamlessly multiplexes with ProGrid audio and data transport devices. Audio and control data from Clear-Com user panels or matrices are sent transparently through the optical fiber network. Each intercom channel can be routed to and from every device on the network using the Optocore Control software. The devices can also be used with other Broaman units as part of a larger routing solution. The Tri/Bi-level video clock input and output module allows the output to be derived from any source in the system.
